I am reaching out so that you pay some attention to the fact that insurance carriers are not delivering on the promised policies patients are purchasing and limiting their care after an accident. This is severely undercutting necessary treatments with a policy that is called FAIR. And it is anything but fair. They're using a database that is not transparent. Nobody really knows how it works. What we do know there is no justification when they are not paying for treatment or cutting reimbursement to providers for the patient's treatment. Thank you for looking into this. If my bills are cut over 80% then it will lead to additional healthcare costs that is a domino effect affecting other patients.

Sincerely

Dr. Diane Sherwood Palmer.
